Budget 2026–27: Signals That Matter More Than the Headlines

Every Budget season, we scan the numbers first. Fiscal deficit. Capex. Taxes. They matter, of course. But over time, I've found that what shapes markets and portfolios is often not what shouts the loudest, but what stays consistent in the background.

Budget 2026–27 is not a headline-grabber. And that is precisely why it deserves attention.

At a broad level, the Budget marks a subtle but important shift: from welfare-heavy spending to capability-building. Over the past decade, India has had to prioritise inclusion and income support. This year, the emphasis is clearly on skills, productivity, institutions and ecosystems. Programmes that link education to employment, support the care economy, build university townships and formalise enterprise networks may not show immediate results, but they shape the quality of growth over time. For long-term investors, this signals intent towards growth that is built, not borrowed.

Exports are another area where the work is quiet but meaningful. Rationalisation of customs duties across electronics, marine products, leather, textiles and even defence components points to a broad-based competitiveness push. Faster clearances, trusted importer frameworks and electronic sealing may sound operational, but exports are won or lost at the margin. Reducing friction matters as much as incentives.

One of the more significant themes running through the Budget is the deepening of capital markets beyond banks. Reforms in the corporate bond market, incentives for municipal bonds, and greater use of REITs and InvITs for asset monetisation reflect a deliberate effort to diversify how India funds growth. This has implications for investors too. As markets mature, debt funds, hybrid strategies and income-oriented solutions become more relevant alongside traditional equity allocations.

The services sector -- long India's quiet strength -- gets welcome policy certainty. A simplified safe harbour regime for IT services, higher thresholds and five-year visibility reduce litigation risk. Tax holidays for data centres till 2047 recognise the long gestation cycles of digital infrastructure.

Another notable shift is geographic. Tier II and Tier III cities are no longer peripheral to the growth story. Public capex, MSME support, education hubs and city economic regions are explicitly focused beyond metros. The next phase of consumption and employment growth will come from smaller cities, and investors looking at real estate, infrastructure, retail and financial services should keep that in mind.

All of this sits within a disciplined fiscal framework. A declining fiscal deficit and sustained public capex without slippage reinforce macro stability. For investors, credibility matters more than drama.

Taken together, Budget 2026–27 feels like a build-for-2047 Budget. Institution-heavy. Ecosystem-led. Reform-continuous rather than announcement-driven.

For investors, the message is familiar but worth repeating. Markets tend to reward patience, balance and a steady process far more than quick reactions. This Budget does not offer shortcuts or sudden boosts. It offers continuity. And that, in investing, is often an underrated advantage. In such phases, the real work for investors is not prediction, but discipline -- staying aligned to asset allocation, keeping goals in focus, and letting time do its job.

Investment Philosophy

Forensics

Use forensic framework to check accounting quality, board governance standards and ownership background.

Acceptable Price

Emphasize reasonably priced businesses with earning power over the medium term, rather than focusing on the short term.

Investment Style Agnostics

Emphasize investing in strong businesses capable of delivering long-term returns, while remaining agnostic to value or growth investing styles.

Robustness

Pick well managed businesses having scalable opportunities and superior return on capital employed.

Investment Objective

The investment objective is to seek to generate long-term capital appreciation from a portfolio that predominantly invests in equity and equity-related securities of Mid Cap companies. However, there can be no assurance that the investment objective of the Scheme will be realised.

Investment Philosophy

Forensics
Use forensic framework to check accounting quality, board governance standards and ownership background.

Acceptable Price
Emphasize reasonably priced businesses with earning power over the medium term, rather than focusing on the short term.

Investment Style Agnostics
Emphasize investing in strong businesses capable of delivering long-term returns, while remaining agnostic to value or growth investing styles.

Robustness
Pick well managed businesses having scalable opportunities and superior return on capital employed.

Investment Objective

The investment objective of the fund is to generate long term capital appreciation by investing in equity and equity related instruments of upto 30 companies with focus in multi-cap space. However, there is no assurance that the investment objective of the Scheme will be realized and the Scheme does not assure or guarantee any returns.

Product Label	Scheme Riskometer	Benchmark Riskometer
This product is suitable for investors who are seeking*: - Long term capital appreciation - To generate income by investing in equity and equity related instrument and derivative segment of upto 30 companies *Investors should consult their financial advisers if in doubt about whether the product is suitable for them.	Edelweiss Focused Fund The risk of the scheme is Very High	NIFTY 500 TRI The risk of the benchmark is Very High

Investment Philosophy

Forensics

Use forensic framework to check accounting quality, board governance standards and ownership background.

Acceptable Price

Emphasize reasonably priced businesses with earning power over the medium term, rather than focusing on the short term.

Investment Style Agnostics

Emphasize investing in strong businesses capable of delivering long-term returns, while remaining agnostic to value or growth investing styles.

Robustness

Pick well managed businesses having scalable opportunities and superior return on capital employed.

Investment Objective

The Fund seeks to generate long-term capital appreciation by investing in a diversified portfolio of equity & equity-related instruments across large cap, mid cap and small cap stocks. However, there is no assurance that the investment objective of the Scheme will be realized and the Scheme does not assure or guarantee any returns.

Investment Philosophy

Forensics

Use forensic framework to check accounting quality, board governance standards and ownership background.

Acceptable Price

Emphasize reasonably priced businesses with earning power over the medium term, rather than focusing on the short term.

Investment Style Agnostics

Emphasize investing in strong businesses capable of delivering long-term returns, while remaining agnostic to value or growth investing styles.

Robustness

Pick well managed businesses having scalable opportunities and superior return on capital employed.

Investment Objective

To provide long-term capital appreciation by investing predominantly in equity and equity-related securities of technology & technology related companies. However, there is no assurance that the investment objective of the Scheme will be realized and the Scheme does not assure or guarantee any returns.

Investment Philosophy

Our FACTOR investment strategy focuses on generating ALPHA by prioritizing Active risk management, maintaining a Long-term orientation when selecting factors, Prudently blending factors, maintaining a bias towards High-quality and growth opportunities, while being Agile and keep evolving the factor sets.

Active Risk Management

Rigorous risk and governance factor filters to arrive at a quality investible universe.

Long-term Factor Orientation

Select core and behavioral factors that have sound academic and economic rationale and have demonstrated relative alpha generation over the long term.

Prudent Blend of Factors

Rigorous back testing of various combinations of factors to identify the most effective blend for consistent outperformance across market cycles.

High-Quality & Growth Bias

Bias towards Growth, Quality, and GARP (Growth At a Reasonable Price) factors while constructing portfolios.

Agile

Focus on creating and maintaining an agile and robust model by continuously assessing and evolving the factor set itself.

Investment Objective

The Fund seeks to generate long-term capital appreciation by investing predominantly in equity and equity related securities with a focus on navigating business cycles through dynamic allocation between various sectors and stocks at different stages of business cycles in the economy. There is no assurance that the investment objective of the Scheme will be achieved.

Fund Manager Commentary

- ❖ The benchmark Nifty Index was down by ~2.90% in the Jan Series.
- ❖ Single Stock future (SSF) rollovers for the month stands at 92%, lower than the average rollovers of last three series at 94%.
- ❖ Average roll levels (spreads) across stock futures were approximately between 50 to 54 bps (cost to long rollers).
- ❖ For the Feb series, SSF open interest stood at ~INR 479k Cr, ~3% lower than Jan series open interest.
- ❖ Roll spreads were in the range of 50-54 bps (28 days), lower than 63-66 bps (28 days) in last expiry.
- ❖ In Jan series, the total AUM of arbitrage category was ~ INR 334,000 Crores, ~2% higher than previous expiry.
- ❖ Our Cash-Future exposure in the fund stands at ~73%.
- ❖ Fills net longs in SSF ~98,400 Cr value, ~7% lower than previous expiry.
- ❖ The Client category (HNI & Retail) net longs in SSF decreased by ~5% to 167k Cr value.
- ❖ Moving ahead in Feb expiry: Key triggers to watch out for will be India budget, RBI policy meet, ongoing quarterly result announcements.

Investment Philosophy

Our FACTOR investment strategy focuses on generating ALPHA by prioritizing Active risk management, maintaining a Long-term orientation when selecting factors, Prudently blending factors, maintaining a bias towards High-quality and growth opportunities, while being Agile and keep evolving the factor sets.

Active Risk Management

Rigorous risk and governance factor filters to arrive at a quality investible universe.

Long-term Factor Orientation

Select core and behavioral factors that have sound academic and economic rationale and have demonstrated relative alpha generation over the long term.

Prudent Blend of Factors

Rigorous back testing of various combinations of factors to identify the most effective blend for consistent outperformance across market cycles.

High-Quality & Growth Bias

Bias towards Growth, Quality, and GARP (Growth At a Reasonable Price) factors while constructing portfolios.

Agile

Focus on creating and maintaining an agile and robust model by continuously assessing and evolving the factor set itself.

Investment Objective

The investment objective of the scheme is to provide capital appreciation and income distribution to the investors by using equity and equity related instruments, arbitrage opportunities, and investments in debt and money market instruments. However, there can be no assurance that the investment objective of the Scheme will be realized or that income will be generated and the scheme does not assure or guarantee any returns.

Investment Objective

The primary objective of the Scheme is to generate capital appreciation with relatively lower volatility over a longer tenure of time. The Scheme will accordingly invest in equities, arbitrage opportunities and derivative strategies on the one hand and debt and money market instruments on the other. The Scheme may also invest in Infrastructure Investment Trusts and Real Estate Investment Trusts. However there is no assurance that the investment objective of the Scheme will be realized

About the Scheme

- * The fund offers exposure to high-growth Southeast Asian economies like Singapore, Indonesia, Thailand, Malaysia, Philippines and Vietnam through JPMorgan's ASEAN Equity Fund.
- * The underlying fund picks from a non-homogeneous region that presents a vibrant yet diverse pool of businesses, with the aim of generating sustainable returns over market cycles. It invests in long-term compounders and medium-term cyclical opportunities.

Notes :

1. Different plans shall have different expense structure. The performance details provided herein are of Direct Plan of the funds. Returns are for Growth Option only. Since Inception returns are calculated on Rs. 10/- invested at inception of the scheme. In case the start/end date is non business day, the NAV of previous day is used for computation. For Edelweiss Liquid Fund, Since Inception returns are calculated on Rs. 1000/- invested at inception of the scheme.
2. Past performance may or may not be sustained in future and should not be used as a basis for comparison with other investments.
3. **Since respective schemes/ options have not completed relevant period (3yr or 5yr) after allotment or units were not available throughout the respective period, no returns are available.
4. @ Returns are annualized * CAGR Return.

BHARAT Bond ETF FOF - April 2032	An open-ended Target Maturity fund of funds scheme investing in units of BHARAT Bond ETF – April 2032	7.24%	4.98	6.05
BHARAT Bond ETF FOF - April 2033	An open-ended Target Maturity fund of funds scheme investing in units of BHARAT Bond ETF – April 2033	7.22%	5.47	6.90

Mutual Fund is one of the best platforms for investors, but the real problem lies in selecting an appropriate fund. MFs provide solution for all type of investors either looking for long term wealth creation or looking for a short term investment solution with lower risk. Although investing without right advice is never recommended but let's learn the basics of choosing an appropriate suitable fund.

How to select an equity fund ?

1. Are you willing to take risk or not?

Riskiness of the fund is first thing one should look before selecting a fund. There are three things one should check before investing. First is Equity allocation; higher the Equity allocation, riskier the fund. Second is Market Cap allocation; funds which have higher small cap allocation are most risky than midcap and lastly the large caps. The third parameter investor should look at is the standard deviation of the fund. Higher the Standard Deviation, riskier the fund. (Assuming 1 being riskiest)

Equity Level	Market Cap Allocation	Risk Ranking
97%	70% Small Cap	1
99%	30% Midcap	2
69%	Midcap 70% Large cap 30%	3

2. Check the Portfolio Turnover Ratio

Portfolio Turnover ratio indicates the proportion of stocks that have changed in the period. The higher the ratio, more the churn of the stocks. For better analysis one should look at turnover ratio of only equity portion. Lower turnover indicates higher conviction of the Fund manager.

3. Check the Sharpe Ratio.

Sharpe Ratio is used to understand the return of an investment compared to the risk. This ratio is calculated by average return earned in excess of the price fluctuation of the fund. This ratio is used to understand that the higher return generated by the fund is a result of additional risk or not.

4. Top 10 and number of Stocks

Top 10 holding as well as number of stocks indicate the concentration of the portfolio. If the number of stocks are too less than the portfolio is considered to be riskier compared to more diversified portfolio. Please note over diversification can also lead to performance dilution.

5. Active Bets

Active Bets means percentage of allocation which is away from the Benchmark. Higher Active bet means that the higher conviction of the fund manager which helps in generating better returns compared to the Benchmark.

How to choose a suitable Fixed Income Mutual Fund?

1. Check the Maturity Profile

This is one of the most important aspect in choosing a Debt Fund. Generally, funds with higher maturity are more prone to price movement risk due to interest rate changes. Hence investors with short term investment horizon should invest in fund with less average maturity like for example investors looking for short term parking can invest into Liquid Fund.

2. Keep an eye on Credit Profile

Investors should closely watch the credit allocation of the fund as those investing in higher (AAA) rated bonds are less exposed to any credit risks compared to those investing in lower rated papers. Following is the list of credit rating along with its riskiness.

Long Term Credit Rating	Perceived Riskiness
Sovereign	
AAA	
AA	
A	
BBB	
BB	
B	
Junk	

3. Check the Fund YTM.

Yield to maturity (YTM) is the total return anticipated if the underlying bond is held until it matures. In Fixed Income Mutual Fund, it is weighted Average yield of all bonds invested by the scheme. YTM of a Fund broadly varies with two parameters; Market Movement (Interest Rate Change, Valuation, Rating changes) and AUM outflow/inflow. Thus, YTM is not the best indicator of return of open debt mutual fund and investors use this only for indication and relative comparison.

4. Check Individual Holding

Even if a product looks suitable for investment from both Maturity as well as Credit Quality point of view; Investors should look at overall portfolio concentration i.e. if the total number of securities in the portfolio are very less, portfolio concentration increases and hence the diversification risk.

5. Asset Allocation

One should check that the overall asset allocation of the fund is in line with the investment objective or not i.e. it should be true to label. Also, check the cash level of the fund as with excess cash surplus in portfolio investor loses on the returns.

Fund Manager : An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Application Amount for Fresh Subscription : This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Amount : This is the minimum investment amount for an existing investor in a mutual fund scheme.

Yield to Maturity : The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

SIP : SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests Rs 500 every 15th of the month in an equity fund for a period of three years.

NAV : The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Benchmark : A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10-Year Gsec.

Entry Load : A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is Rs. 100 and the entry load is 1%, the investor will enter the fund at Rs 101.

Note : SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor

Exit Load : Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance, if the NAV is Rs 100 and the exit load is 1%, the redemption price would be Rs 99 Per Unit.

Modified Duration : Modified duration is the price sensitivity and the percentage change in price for a unit change in yield

Standard Deviation : Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Sharpe Ratio : The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta : Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

AUM : AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holdings : The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme : The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have subcategories.

Rating Profile : Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

Potential Risk Class : A Potential Risk Class matrix consists of parameters based on maximum interest rate risk (measured by Macaulay Duration (MD) of the scheme) and maximum credit risk (measured by Credit Risk Value (CRV) of the scheme).
